

# RADIOLOGY REPORT

Patient: Arjun Mehta   MRN: SYN-DC-1001   DOB: 1978-03-14  
Study Date: 2026-04-02   Modality: X-Ray   Region: Chest, PA and Lateral  
Radiologist: Dr. A. Singh, MD

## FINDINGS

The lungs are hyperinflated bilaterally with flattening of the diaphragms, consistent with chronic obstructive lung disease. No focal consolidation, pleural effusion, or pneumothorax is identified. Cardiac silhouette is within normal limits for size. No acute osseous abnormality of the visualized thoracic skeleton.

## IMPRESSION

1. Findings consistent with COPD; no acute consolidation or effusion to suggest pneumonia. 2. No evidence of pneumothorax. Clinical correlation recommended.
